Abstract (Basic): EP 1068855 A1

NOVELTY - Structurized oil composition includes a liquid oil phase structurized by a polymer with a polyamide backbone, with an at least 4C terminal alkyl or alkenyl group(s) joined to the backbone by an ester, associated with a liquid amphiphile compound(s) having HLB below 8.

USE - The polyamide is used to form an oil phase and this in turn is used in cosmetic composition (claimed), particularly for the care, treatment or making up of skin, long-haired leather and lips.

ADVANTAGE - The composition has a good gloss and does not migrate.
